

Mercer Advisors

National · Integrated Wealth Management RIA · merceradvisors.com

Brand recognition is exceptional; the structural layer that AI-era buyers query first is largely unbuilt.

AI VISIBILITY · AEO

llms.txt is best-in-class; structured data and service-query visibility are absent.

llms.txt	Present and comprehensive — updated March 2026, 110+ FAQ entries indexed across core services, specialty verticals, and compliance documentation.	present
AI crawlers	GPTBot, ClaudeBot, PerplexityBot, Google-Extended, and OAI-SearchBot are not named in robots.txt — all fall under wildcard rules and are not explicitly blocked.	allowed
Structured data	Zero JSON-LD found sitewide. No Organization, Service, LocalBusiness, or FAQPage schema on any page tested — AI agents cannot identify services or audience from machine-readable signals.	absent
Search presence	2 of 8 queries visible (25% overall); 1 of 7 non-branded queries (14%). Branded search is clean at position 1.	partial

01 · query	"fee-only fiduciary financial advisor for families" Absent. NAPFA holds positions 1, 5, and 7; the remainder are advisor directories. Mercer is invisible despite owning all three credential claims that define this query.
02 · query	"integrated wealth management tax planning estate planning" Absent. Creative Planning occupies positions 3 and 7 with service pages built for this exact phrase; Mercer has no comparable service-page architecture despite offering all three disciplines in-house.
03 · query	"wealth management for physicians and dentists" Absent. White Coat Investor holds position 1 as a gatekeeper aggregator; the path to this audience runs through earning a WCI recommendation, not outranking it.
04 · query	"best RIA firms for affluent families" Present, position 4. Visibility is award-driven, not from a purpose-built service page — a fragile ranking that competitors are actively displacing with content.

SEARCH VISIBILITY · SEO

Branded search is clean; non-branded buyer-intent queries return nothing.

Website	Live, JS-rendered, award-forward homepage. Content hub (/insights/, 13 categories, webinars, guides) is a genuine asset. No service-page architecture targeting buyer-intent phrases exists.	live
Branded search	Position 1 owned cleanly. Positions 2 and 3 are occupied by unrelated "Mercer Wealth Management" firms — a structural name-collision problem that SEO alone cannot resolve.	position 1
Non-branded visibility	1 of 7 non-branded queries visible (14%). Absent from every service-intent, ICP-specific, and category-aggregator query tested.	not present
Data layer	Scrape-only. Zero JSON-LD schema sitewide. Existing content renders in initial HTML (not JS-locked), but services, pricing, and audience descriptors are absent from the page entirely — not hidden, just missing.	scrape-only

KEY FINDINGS

The gap is not brand authority — it is data layer and content architecture.

01 · finding	Zero structured data sitewide means AI agents cannot determine what Mercer does, who it serves, or what services it offers from machine-readable signals alone.
02 · finding	Absent from 6 of 7 non-branded queries: a firm ranked #1 by Barron's is invisible to buyers who do not already know the name.
03 · finding	The "family office for every family" positioning maps to an unoccupied search space — no competitor owns the \$2M–\$15M mid-market family office query, and Mercer is not in it.
04 · finding	NAPFA directories hold positions 1, 5, and 7 on fee-only fiduciary queries; a free NAPFA listing would resolve this without a single content investment.
05 · finding	llms.txt is genuinely best-in-class — comprehensive, current, 110+ FAQ entries indexed — but AI citation engines also weight structured data and FAQ schema, both of which are absent.

RECOMMENDED NEXT STEPS

Five moves unlock the visibility that brand authority alone cannot.

01 · step	Add Organization and Service JSON-LD schema sitewide — one sprint that resolves the entire data-layer gap and immediately improves AI citation accuracy.
02 · step	Submit to NAPFA's Find-an-Advisor directory — free, one submission, and it places Mercer inside a SERP where NAPFA currently holds three of ten positions.
03 · step	Rewrite the homepage opening as a Quick Answer block: replace the award-first lede with a two-sentence definition of what Mercer does, for whom, and what makes it different.
04 · step	Publish an integrated wealth management service page combining tax, estate, investment, and planning explicitly — this addresses the highest-traffic competitive query where the firm is currently absent.
05 · step	Build a long-form piece targeting the \$2M–\$15M family office buyer — the only unoccupied SERP position in this audit; Mercer is uniquely positioned to own it.
